### LEGEND

- ✈ indicates an airmail issue
- ✈ indicates some of the set are airmail issues
- indicates imperforate

From the mid 1970s to the mid 1980s, stamps began appearing with various paper, watermark, perforation and gum varieties, and in various combinations.

These include:

- ordinary paper
- phosphor or fluor paper
- cream chalky paper
- white paper
- granite paper (with fibres)
- fibreless paper
- cream gum
- white gum

Most of these varieties are not found in collections and provision is not normally made for them in mainstream hingeless albums.

Consequently, this price list is a simplified listing, but we do identify those issues with major production varieties, as follows:

- |  |     |
|--|-----|
| exists on cream chalky and white papers            | CCW |
| exists on ordinary, phosphor and / or fluor papers | OPF |
| exists on granite and fibreless papers             | GF  |
| exists with cream & white gums                     | CWG |
| perforation varieties                              | PV  |
| watermark variety                                  | WV  |

We supply stamps as listed on a simplified basis without identifying further specific printing attributes.

### Imperforates

We list those stamps which were issued officially as imperforate.

We do not list those items which are essentially security printer's waste which have found their way onto the market by nefarious means.

There appears to be an unusually high number of such examples indicating continual leakages from the printers.
