LEGEND

Phosphor tagging of select US stamps commenced in August 1963. Not all stamps from that date are tagged.
In general, tagged stamps are worth more than untagged stamps for the same issue.

AOP	All Over Phosphor (Tagging)
LBT	Large Block Tagging
SBT	Small Block Tagging
NP	Non Phosphor (Tagging)
HiBrite	Paper with added fluorescent brighteners; reacts violet under UV HiBrite paper issues are worth more than the corresponding issue without paper brightener.
PCP	Phosphor Coated Paper (precoated)
PUP	Phosphor Uncoated Paper (uncoated)
Block Tagging	A rectangle of phosphor on the stamp, not covering the whole face, and leaving a non phosphor frame. For many issues, the phosphor cylinder is misaligned thus the phosphor block is not centred on the stamp and can even overlap on adjacent stamps.
Colours	Phosphor glows orange red - air stamps before 1979 Phosphor glows yellow-green - air, commemorative & definitive stamps after 1979 Phosphor intensity is not uniform and can vary within an issue and between issues
UV Lamp	Tagging is not visible under white light but can be seen using a SHORT wave UV light.
Wet Print	on soft paper
Dry Print	on stiffer, whiter paper, sharper images

				 <p>From the first issue in 1964 to the last issue in 1993, a ZIP Code symbol was added to each selvedge corner of counter sheets. Each sheet used 4 identical symbols. Occasionally, the symbol was placed away from the corners. The purpose of these symbols was to promote the use of ZIP Codes [address codes for the automatic sorting of letters] in the USA. The various codes used are illustrated above (Michel: USA-Spezial). A listing for codes single stamps with a ZIP tab, only for items in stock, is at the end of this list.</p>
